

BARRICADE®

Fire Blocking Gel

SAVE YOUR WORLD

QUICK ATTACK SYSTEM

The Barricade Quick Attack system comes with an optional adjustable gel inductor that allows the user to "dial up" the gel concentration for fire break use or exposure protection.

The Barricade Quick Attack is the tool that the Fire Service and Institutional sector has been looking for. The Barricade Quick Attack can extinguish hard to control fires, create firebreaks and protect structures that are being threatened by the most severe fires.

The Barricade Quick Attack system can be quickly deployed, is simple to operate and allows for easy clean-up.

The Barricade Quick Attack is an end of the line application system that gives the firefighter mobility and flexibility. Simply connect the nozzle to the desired hose and attach the container of Barricade concentrate and you are ready to go.

With the Barricade Quick Attack, the firefighter has the option of using 20mm, 25mm or 38mm fire hose. With a nominal flow rate of 56.8 litres/min, the Barricade Quick Attack has the ability to coat 50 square metres in one minute and 15 seconds with 690 KPa at the nozzle.
